What Could Be Happening to Our Brains During Study Abroad?

Thursday, April 24  Memorial Union, Prairie room noon – 1 p.m.

Yuliya Kartoshkina, M.A., Ph.D. candidate, Department of Educational Foundations and Research, University of North Dakota

Learn from studies in neuroscience, psychology and education literature about the formation and possible changes of cultural patterns in our brains due to studying and living abroad. This session is designed for researchers, practitioners, students and other interested persons who want to understand the learning experiences of study abroad participants and find ways to enhance those experiences through practical brain-based activities.
